

RESTECH SOLUTIONS CONTINUALLY MONITORS THE DARK WEB

Deep Diver is our Dark Web breach mining engine. *Deep Diver* doesn't sleep! It continually monitors the Dark Web for compromised credentials and PII. When a new breach is identified, it alerts us immediately. We spring into action and will review the breach, send you an alert, and assist with any remediation steps as required.

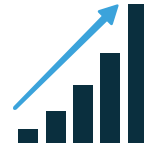

Deep Diver, is the most thorough and accurate breach mining engine; uncovering more unique breaches than any other Dark Web tool available today. That's because we don't search the Dark Web, we mine the entire community for accidental exposures, bad actors and hackers who traffic in breached data.

DARK WEB MONITORING + SEARCH

Features and Benefits

Continuous Domain Monitoring

Increase Margins & Reduce Costs by Lowering Risk

Company Risk Index and Progress Metrics

Account Take Over & Identity Theft Protection Enablement

Incident Reporting for Complete Audit Trail

Real-Time Alerts When New Breaches Happen

Company Branded Clients Emails & Alerts

Most Complete, Validated Breach Database

Live Dark Web Search for Vendor Due Diligence

Through a mix of artificial intelligence and human interaction, *Deep Diver* continually scours the Surface Web, Deep Web and Dark Web for breached credentials, confidential information and PII.

Currently we have more than 98bn breach records, and that grows every minute.

Our Live Search and Monitoring tools leverage *Deep Diver* to expose these breaches, alerting you and your employees so you can proactively protect them through the ResTech Solutions Cyber Security Platform.

*Also available as a stand-alone subscription.
