

What is Network Continuity?

Why Does it Matter for Small Businesses?

Today's businesses rely on technology more than ever.

Innovations like cloud-based applications, VoIP, and mobile keep things moving...as long as they're working properly.

At the heart of all technology is the network. Without it...

- Business stops
- Communication stops
- Transactions stop
- Money is lost

Network downtime can be a real-life nightmare for any business.

Fortunately, always connected networking has arrived to help businesses stop losing sleep over this issue.

Always connected networking equipment - AKA "Network Continuity" - was designed with a mission to end network downtime.

**So what exactly is
Network Continuity?**

Network Continuity is NEVER having to worry about your Internet service. That's right: seamless, uninterrupted, always connected network operation.

How is this accomplished?
No, not by magic...

Network Continuity is achieved by something pretty tangible:

A fully integrated 4G LTE failover and failback.

This means:

Always available cloud management, WiFi roaming, self-healing powers, hardened security, and built-in safeguards for maximum uptime.

As a business owner, why should you care?

Two words:

Your Customers

**Networks can make or break a small
or mid-sized business's reputation with
its customers.**

Lost network connections result in poor business performance and customer satisfaction suffers.

Imagine you're a hotel whose WiFi goes down. Your business travel guests wouldn't be too pleased.

“New technology changes the nature of competition.”

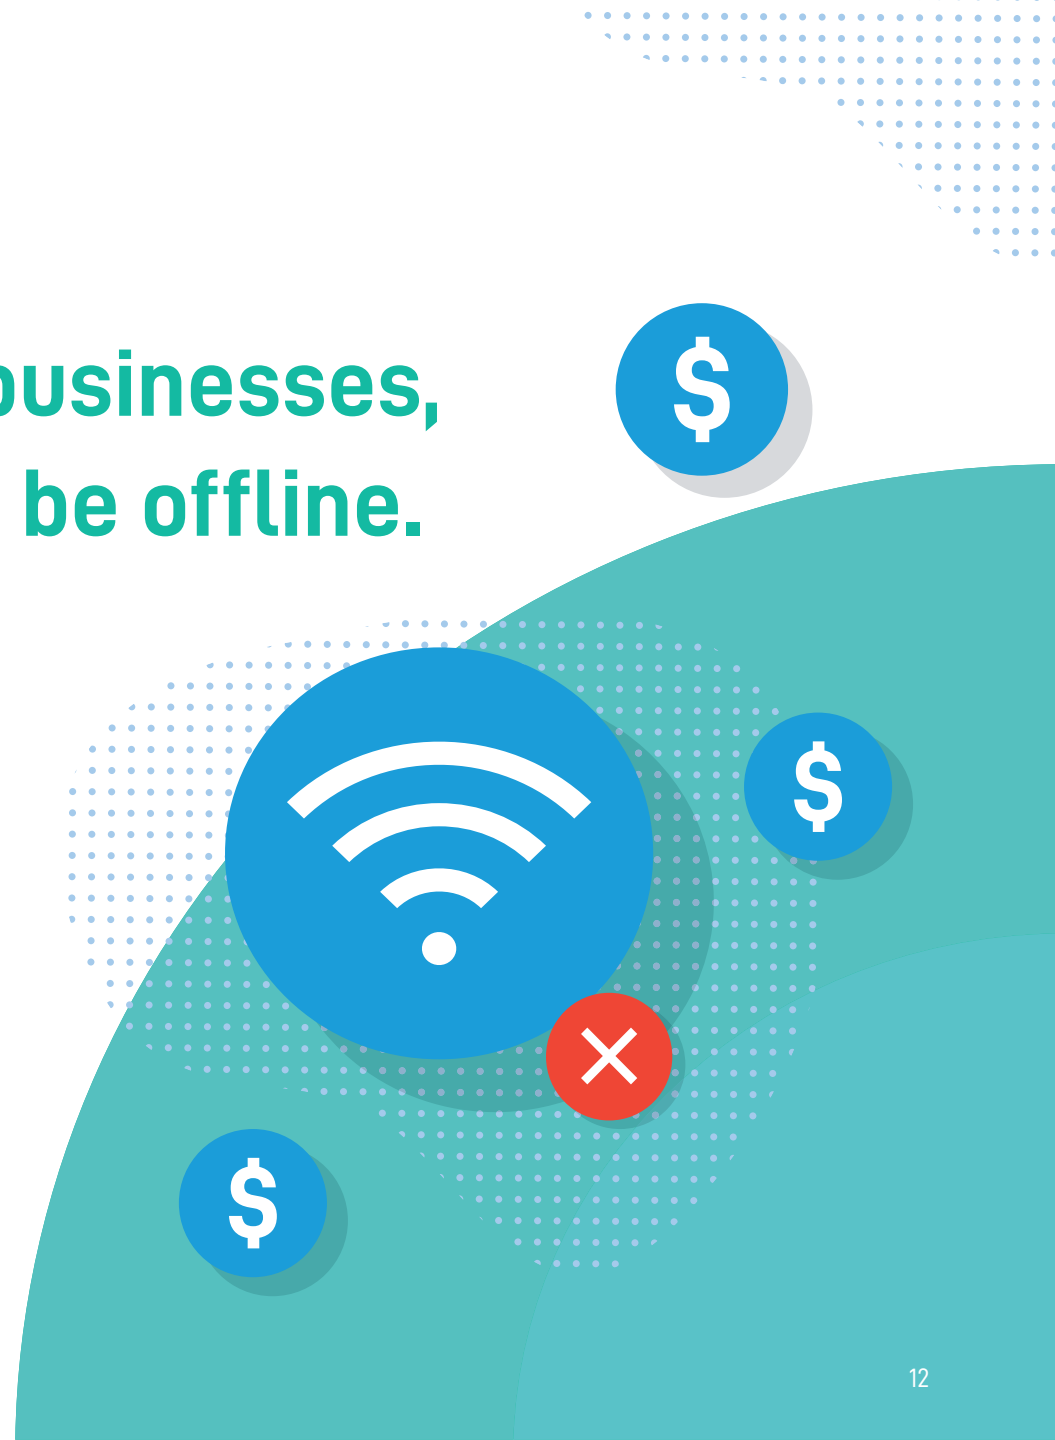

Network Continuity gives SMBs an advantage over the competition.

Michael Porter from the Harvard Business Review once said...

The Bottom Line:

In today's competitive landscape, businesses, no matter their size, can't afford to be offline.

We have a networking solution that is always connected. Our high performance product line provides businesses with peace of mind and the confidence that the network will be there when they need it. **It's that simple.**
